

# LaTeX Environment

## LaTeX Environments

The contents of this div will be output in a `center` LaTeX environment, but will appear in HTML (and any other output format) as a simple div with the class `center`

## LaTeX Commands

Will replace spans of class `ce` with the `\ce{}` command for LaTeX output, but leave the spans intact for HTML output. So `[H2SO4]{.ce}` becomes  $\text{H}_2\text{SO}_4$ .

## Advanced Environments and Commands

You can also combine environments and commands (with options) to address more complex scenarios.

Both environments and commands can accept an `options` attribute which will be properly applied in LaTeX and will be available as an attribute in HTML output.
